

Burning instructions

for hand-painted candles from nobunto

Dear Customers,
in order to prolong the enjoyment of your unique candles, please take note of the following information:

All our pillar or cube candles (*not tapers*) should only be left burning for 2-3 hours during the first and second usage. The cooling off/down phase until the next ignition/usage should be at least 1 hour. The candle should not burn longer than 2 hours during subsequent usage.

The reason for the above is that the flames, in order to create the desired "lantern effect", burn down in the centre of the candle, thereby creating the glow in which the external painted effect is clearly visible. (*see pictures below*)

However, this very beautiful "lantern effect" produces enormous heat inside the candle which can also cause the outer walls of the candle to melt, thereby causing molten wax to leak and run out.

Please follow also the instructions below.
